

ABSTRACT OF THE DISCLOSURE

A program for use in an information processing apparatus is disclosed. The apparatus has the function of displaying at a user interface a plurality of information items concerning a communication path for sending a data input/output request to a storage device. The program permits the apparatus to execute at least either one of the steps which follow: updating at least one of the information items being displayed in accordance with a present state of the communication path, and updating at least one of the information items being displayed when receiving from the user interface an input which requests updating of the information being displayed.
